HTML Practice

Prepare a web page (under your cs.smith.edu user account), which is viewable for all Internet users. Prepare 3 web pages, besides the index.html and make them all accessible from the index.html and make index.html accessible from all the pages by links. (if you want, you can put some information about your self or books or movies you like or books you read or courses you attend, or whatever you want, the content is completely up to you but below items are required as part of web pages)

- Put an image to one of the web pages
- Prepare a table with 4 rows and 3 columns and use rowspan and colspan for at least once.
- Make first row of table bold
- Use at least two colors as background of 2 different cells in the table
- In one of the pages, put a list of links (links to the web pages you like) (at least 5 items).

Finally archive all the files (make a .zip or .rar file) and mail them as a submission.
